

Nimble Property
Hotel Accounting Simplified

CYBERSECURITY IS TOPMOST CONCERN FOR HOTELIERS IN POST COVID ERA

With Covid past us, Hoteliers are grappling with a work from home shift in culture just like all other industries. Remote working has brought its own perils especially related to cybersecurity risks.

Cybersecurity risks are more evident in hotels that use non-accredited Cloud Accounting Software or solution that is designed on age-old technology. Such software applications are prone to cyber-attacks that breach the valuable data of Hoteliers plunging them to encounter fake payment requests, fake checks, etc.

The answer to this major risk of cybersecurity for Hoteliers is to select the latest technology-driven Hotel specific software tailored for their business. **Nimble Property** is hosted on AWS cloud EC2 servers, making it highly secured and reliable with seamless accessibility. **Nimble Property** is one such Hotel specific enterprise accounting software that helps hundreds of hotel owners to have complete visibility of their costs and help them deploy labor and other cost-related resources efficiently to positively impact profits.

MFA (Multi Factor Authentication through email OTP) makes your login to Nimble fully-secured and all the user credentials are well-encrypted with the means of highly robust predefined algorithms.

It means only authorized individuals with allocated privileges are entitled to access the system, so no chance of malicious encounters or compromise on losing sensitive data.

Data encryption in transit with SSL certification avoids all the data leakage possibilities within the Nimble applications, and periodic security checks, mechanisms and policies keep intruders at a bay.

Stop worrying of losing your data due to any disasters or power outages, as Nimble acquires an automated database backup mechanism which is all-set in place.

With the above streamlined processes and data automation seamlessly transacted through software such as Nimble Property let's you handle the ever-growing threat of Cybersecurity in the post COVID era.
